Introduction

The Jefferson County Coroner/Medical Examiner's Office (JCCMEO) is notified by law enforcement agencies and medical facilities to investigate approximately 33% of the deaths occurring in Jefferson County. Pursuant to State of Alabama, Act No. 79-454, notification is made when there is suspicion of criminal violence or criminal neglect, when death occurs in suspicious or unusual circumstances, when deaths are thought to result from trauma or violence, in any prison or penal institution, when in police custody, or deaths due to disease constituting a hazard to public health when requested in writing by the County Health Officer.

The Jefferson County Coroner/Medical Examiner’s Office is fully accredited by the National Association of Medical Examiners. www.thename.org

Mission

The mission of the Coroner/Medical Examiner office is to establish the identity of human remains and to determine the cause, manner, and circumstances surrounding death in all sudden and unexpected deaths occurring within Jefferson County, Alabama.

Death Statistics

This report contains aggregate data of the cases investigated by this office. This report does not contain data on all deaths that occurred within Jefferson County, but rather only those deaths that were investigated by the Jefferson County Coroner/Medical Examiner’s Office.

You can visit the Alabama Department of Public Health website to obtain data on all deaths that occurred within Jefferson County, Alabama: www.adph.org/healthstats

Death Certificates

The Coroner's Office cannot provide copies of death certificates; death certificates must be obtained through the Jefferson County Department of Health or the State of Alabama Vital Records office.

History

Jefferson County operated under an elected coroner system since the county’s inception in 1819 until 1931. In a coroner system the County Coroner was elected to office by the citizens of Jefferson County and was typically a lay person with no formal training in medicolegal death investigation.

On May 27, 1931, the office of County Coroner was abolished by Act of State Legislature. The office was subsequently reestablished with the position of County Coroner being an appointed position by the Jefferson County Commission and not an elected position by the citizens of the county. The Act referred to the coroner as the "Agent, County Commission, as Coroner".

In January 1977, by Act of State Legislature, the office of County Coroner and the coroner system in Jefferson County was abolished and the Jefferson County Coroner/Medical Examiner’s Office (JCCMEO) was established. This was the end of the coroner system and the beginning of the medical examiner system in Jefferson County. The new law required the Coroner/Medical Examiner of Jefferson County to be a board certified forensic pathologist.

On July 26, 1979, pursuant to State of Alabama Act 79-454, the office of County Coroner in Jefferson County was once again abolished and the Jefferson County Coroner/Medical Examiner’s Office (JCCMEO) as it is known today was established. As with the previous Act, the new Jefferson County Coroner/Medical Examiner Act set forth that the Coroner/Medical Examiner shall be an appointed position by the Jefferson County Commission and that the Coroner/Medical Examiner shall be a board certified forensic pathologist. The act also established a new regulatory commission, the “Jefferson County Coroner/Medical Examiner’s Commission”, to promulgate rules and regulations governing the reviews and investigations of the Coroner/Medical Examiner’s Office and the conditions upon which such investigations shall be conducted. The act also retained in the office all the authority vested in coroners by the state laws of Alabama.

The Coroner retained a physical office on the second floor of the Jefferson County Courthouse and at the Bessemer Courthouse until 1977, when at that time both offices were consolidated and moved to its current location at Cooper Green Mercy Health Services.
Medicolegal Death Investigation

A medicolegal death investigation is an official investigation or inquest into the manner, cause, and circumstances surrounding death. As it applies, a medicolegal death investigation is a combination of medicine and law, with a purpose to answer the questions of death. The answers obtained in these investigations can assist with criminal and civil litigation, insurance claims, the distribution of estates, and the health and safety of the public. These investigations are performed by trained medicolegal death investigators (MDIs) and can represent multiple different disciplines. The MDI investigators can be a coroner, deputy coroner, forensic pathologist, morgue technologist, forensic odontologist, forensic anthropologist, forensic toxicologist, or a criminalist.

At the JCCMEO these investigations are begun by deputy coroners who are formally trained MDIs. When a death is reported to the JCCMEO it is the responsibility of the deputy coroner to determine if the death falls under the statutory jurisdiction of the JCCMEO and if so, will jurisdiction be assumed or declined. Pursuant to State of Alabama Code 11-5-35 (Act 2006-581, p. 1527, §6) the Jefferson County Coroner/Medical Examiner’s Office only has the authority to certify a death if the offense, occurrence, or incident that ultimately resulted in the death occurred within the geographical boundaries of Jefferson County, Alabama. Therefore, if the sequence of events that ultimately resulted in the death began in a county or state other than Jefferson County, Alabama then the coroner’s office of that county should be notified of the death.

Declined Jurisdiction: Jurisdiction is declined if investigators (i.e. law enforcement, paramedics, and/or medical staff, and the deputy coroner) find no signs of foul play, injury, and/or evidence of current substance abuse associated with the death and; if the decedent has a documented significant medical history and is currently under the care of a primary care physician.

Assumed Jurisdiction: Jurisdiction is assumed if there is suspicion of criminal violence or criminal neglect, when death occurs in suspicious or unusual circumstances, when deaths are thought to result from trauma or violence, in any prison or penal institution, when in police custody, or a death due to disease constituting a hazard to public health when requested in writing by the County Health Officer.

If jurisdiction is to be assumed a deputy coroner in most cases responds to the scene of the death to begin the investigation. The decedent is transported from the scene to the JCCMEO for examination, which is usually completed within 24 hours from the time of death by one of the forensic pathologist on staff. An examination/autopsy is necessary to accurately determine cause, manner, and circumstances surrounding the death, so to satisfy statutory requirements, for the good of public health, and to assist with potential civil and criminal litigation. Depending on the circumstances surrounding the death and the evidence that is needed to substantiate the death an autopsy may not be performed in every case, but rather a less invasive external examination is performed. The final examination/autopsy report is usually available 4-6 weeks after the date of death.

Section 2: 2016 Total Case Data

General Statistics and Notable Trends

There was a 13.2% increase in the total number of deaths reported to the JCCMEO this past year, from 2,409 deaths in 2015 to 2,728 deaths in 2016.

There was a 1.9% increase in the total number of deaths where jurisdiction was assumed, from 906 cases in 2015 to 924 cases in 2016; resulting in a proportional 1.8% increase in the number of examinations and the number of bodies transported.

The total number of homicide and accidental deaths increased in 2016 compared to 2015; while natural, suicide, and undetermined deaths all decreased in 2016.

Section 3: Manner of Death

Accident

Accidental deaths accounted for 47.1% of the deaths investigated by the JCCMEO in 2016, and is the largest percentage of all manners of death.

There was a 17.8% increase in the total number of accidental deaths, from 370 deaths in 2015 to 436 deaths in 2016, and is the highest year since 2000.

Drug deaths were the most common cause of accidental death in 2016 accounting for 54.8% of the deaths, followed by motor vehicle deaths at 27.9% of the deaths.

The most common race was white representing 63.7% of the accidental deaths, while male was the most common gender representing 70.8% of the accidental deaths.

Section 4: Infant/Juvenile Deaths

Infant/Juvenile deaths accounted for 4.4% of the deaths investigated by the JCCMEO in 2016. There was a 10.8% decrease in the total number of infant/juvenile deaths, from 46 deaths in 2015 to 41 deaths in 2016. Infant deaths increased 55.5%, from 18 deaths in 2015 to 28 deaths in 2016, while juvenile deaths decreased 53.5%, from 28 deaths in 2015 to 13 deaths in 2016.

Infants (<1 year of age): Deaths due to co-sleeping was the most common means of infant death in 2016, accounting for 18 of the 28 or 64.2% of the infant deaths. Accidental death was the most common manner of infant death, accounting for 53.5% of the deaths. The most common race was black representing 71.4% of the infant deaths, with white accounting for 28.5% of the infant deaths. Infants 2 weeks and 4 weeks of age had the highest mortality rate accounting for 42.8% of the deaths.

Juveniles (1–17 years of age): Deaths due to firearms was the most common means of juvenile death in 2016, accounting for 53.8% of the deaths. Accident was the most common manner of death, accounting for 53.8% of the juvenile deaths, with Homicide accounting for the remaining 46.1% of the deaths. The most common race was black representing 85% of the juvenile deaths, with white accounting for 15% of the juvenile deaths.

Total Number of Juvenile Deaths by Manner of Death and Gender, 2016

Figure 4.13: N=13, represents all juvenile deaths (1-17 years of age) by manner of death and gender.
Section 5: Motor Vehicle Deaths

Motor vehicle deaths accounted for 13.2% of the deaths investigated by the JCCMEO in 2016. For the purpose of this report motor vehicle deaths include airplane, automobile, train, and pedestrian deaths.

There was a 12.9% increase in the total number of motor vehicle deaths, from 108 deaths in 2015 to 122 deaths in 2016; and is the second highest year in the last 16 years, tied with 2011 and only surpassed by 128 deaths in 2004.

Single vehicle collisions were the most common means of motor vehicle death, accounting for 45.9% of the deaths, followed by multi-vehicle collisions accounting for 35.2% of the deaths and motor vehicle-pedestrian collisions accounting for 15.5% of the deaths.

Figure 5.7: N=122, percentage of motor vehicle deaths by blood alcohol concentration (BAC).
Section 6: Overdose Deaths

Overview

The data in this section represent all overdose deaths investigated by the Jefferson County Coroner/Medical Examiner’s Office in the 2016 calendar year where the direct cause of death was due to an overdose/toxic level of illicit drug(s), prescription medication(s), prescription opioid(s), ethanol (alcohol), or other poison(s).

This section does not reflect data on other types of deaths where drugs or ethanol contributed to the death, but was not the direct cause of death. An example of a death that would not be included in this section would be a motor vehicle fatality where the decedent/driver of the vehicle was intoxicated, but the immediate cause of death was trauma due to the collision.

For the purpose of this report overdoses have been categorized into the following four Means of Death:

- **Drug** - refers to all overdoses where the direct cause of death was due to illicit drug(s) or, the direct cause of death was due to prescription medication(s) and/or prescription opioid(s) in combination with illicit drug(s). For the purpose of this report “illicit drugs” refers to illegal street type drugs (i.e. cocaine, heroin, methamphetamine, etc.).
- **Prescription Medication** - refers to all overdoses where the direct cause of death was due to only prescription medication(s).
- **Prescription Opioid** – refers to all overdoses where the direct cause of death was due to only prescription opioid(s).
- **Ethanol (alcohol)** – refers to all overdoses where the direct cause of death was due to a toxic level of ethanol (alcohol).

Often drug overdoses are found to be a combination of illicit drugs, prescription medications, ethanol (alcohol), and/or other poisons; therefore a single death might be represented multiple times in this section. Because of this it is important to recognize that in the following graphs and tables the totals for each of the drugs represents the number of occurrences that particular drug was found to be either the single cause of death or a component in conjunction with another drug(s) that combined was the cause of death.
General Statistics and Notable Trends

There was a 12.0% increase in the total drug deaths this past year, from 224 drug deaths in 2015 to 251 drug deaths in 2016.

There was a 116.3% increase in fentanyl deaths, from 49 deaths in 2015 to 106 deaths in 2016.

There was a 3.0% increase in heroin deaths, from 97 deaths in 2015 to 100 deaths in 2016.

There was a 70.2% decrease in prescription opioid deaths, from 74 deaths in 2015 to 22 deaths in 2016.

Most Common Prescription Medications Causing Death: 2010-2016

Table 6.4: Rx medications and Rx opioids. A single death might contain multiple drugs therefore; a single death might be represented multiple times in this table. The total for each drug represents the number of occurrences for that calendar year where that particular drug was found to be either the single cause of death or a component in conjunction with another drug(s) that combined was the cause of death. Also, the deaths represented in this table might be a result of a combination of prescription drug(s) and illicit drug(s). Often drug overdoses are found to be a combination of both prescription and illicit drugs.
